

FOR THE RCC TEAM

Editing & Publishing the Website

A short, no-jargon guide to updating rivercitymemphis.org. If you can edit a Google Doc, you can do this.

The two-step rhythm

Every change you make to the website follows the same pattern. **Edit** in one place, **publish** from another. That separation is on purpose — it gives you a chance to make several edits without anything going live until you say so.

EDIT HERE — Sanity Studio

rivercitymemphis.vercel.app/studio

Where you change copy, swap images, add FAQ items, update service times.

Changes save automatically as drafts. Nothing goes live yet.

PUBLISH HERE — Admin

rivercitymemphis.vercel.app/admin/publish

Where you push your drafts live. One click per page.

Bookmark both URLs — you'll use them often.

Three steps, every time

1. Open **/studio**, find the page, make your changes (it auto-saves).
2. Open **/admin/publish**, find the page in the list of pending drafts.
3. Click **Publish**. The new version is live on the public site within about a minute.

Step 1: How to Edit

Editing happens inside **Sanity Studio** — a friendly form-based editor for every page on the site.

Get in

1. Visit rivercitymemphis.vercel.app/studio
2. Sign in with the Sanity account that David invited you with. (If you don't have one, ping David at david.wilson@uadrinc.com.)
3. You'll land in the Studio. Look at the **left sidebar** — every editable page is listed there.

Find your page

The left sidebar shows everything that's editable. Some highlights:

- **Site Settings** — address, phone, email, service time, social links, main menu
- **Home Page** — hero video, headline, current series block, kids & students cards
- **Who We Are Page / What to Expect / Location Page / FAQ Page** — the Visit section
- **Connect Page / Next / Family Ministry / Be Rich / RCC Groups** — Connect & Groups
- **Contact Page / Give Page** — the obvious ones
- **Leadership** — each pastor's photo, name, role, and bio
- **Sermon Series** — every series with its sermons inside
- **Events** — these come from Planning Center, so edit there, not here

Make your changes

1. Click the page you want to edit (e.g. **Home Page**).
2. The page opens as a form with each section clearly labeled (Hero, Current Series, etc.).
3. Edit any field — type new copy, drag a new photo in, change a button label.
4. Sanity **auto-saves** as you go. An orange line next to a field means you've changed it but it's still a draft.

WHAT YOU'LL SEE

At the top of the document you'll see two pills: a green ● **Published** and an orange ● **Draft**. Both showing means you have unsaved changes that haven't gone live yet. That's normal — head to **/admin/publish** when you're ready to push them. Changed your mind? Click the ... three-dot menu in the top-right and pick **Discard changes**.

Step 2: How to Publish

Once you've made your edits in Studio, push them live from the admin page.

The publish flow

1. Visit **rivercitymemphis.vercel.app/admin/publish**
2. Your browser will ask for a username and password. Use the credentials David shared with you. (Tick "Remember" if your browser offers it.)
3. You'll see a list called **Publish Drafts**. Every page you've edited but not yet published appears here.
4. Find the page you want to push live and click its **Publish** button.
5. Wait a second — the button changes to **Publishing...** and then **Published ✓**.
6. Visit the public page (e.g. rivercitymemphis.org) to see your change. It usually shows up in under a minute.

GOOD TO KNOW

You can publish multiple pages in one sitting — just click **Publish** on each. If nothing is in the list, that means there's nothing pending — either everything's already live or no one's made edits.

Refreshing the page

If you don't see your latest edit in the list, your browser may be holding a cached version of the admin page. Hard-refresh with **Cmd + Shift + R** (Mac) or **Ctrl + Shift + R** (Windows).

Common Tasks

Quick recipes for the things you'll do most often. All edits start in **/studio**; remember to head to **/admin/publish** when you're done.

Swap the homepage hero video

Studio → Home Page → Hero section → **Hero video** field. Drop in an MP4 (keep it under 10MB — compress with HandBrake first if needed). Also update the **Video poster image** just below so the still matches the new first frame. Leave the field empty to fall back to the original brand video.

Update service times or address

Studio → Site Settings. Edit **Service time**, **Address**, **Phone**, or **Email**. These flow through to the footer, the Location page, the contact page, and the SEO data Google reads.

Add or edit a FAQ

Studio → FAQ Page. Scroll to the **Items** list. Click **Add item** to create a new one or click an existing item to edit it. Each item has a **Question** and an **Answer** (rich text — you can add links, bold, headings).

Update a leadership bio or photo

Studio → Leadership. Pick a pastor. Update the photo (drag in a new one), the role, or the bio text. Display order on the live page is fixed: Jonathan → Eddie → Ken → Barrett.

Post a new sermon

Studio → Sermon Series. Either open an existing series and click **Add sermon**, or click **Create new document** to start a new series. Each sermon needs: **title**, **date**, **speaker**, **scripture**, **video platform (Vimeo or YouTube)**, **video ID**. (The video ID is the part of the URL after the last slash — e.g. for vimeo.com/123456789 the ID is 123456789.)

Change the menu / navigation

Studio → Site Settings → **Main navigation**. Drag items to reorder. Click an item to rename it, change its link, or add submenu items. Both the desktop nav and the mobile hamburger pull from here.

Update an event

Events come from **Planning Center**, not Sanity. Edit the event there and the website picks it up automatically — no publishing needed. Inside Studio you can still toggle individual events as "Show on site" or "Hide" under the **Events** menu item.

Tips & Troubleshooting

My change didn't show up on the live site

- Did you publish it? Edits stay as drafts in Studio until you click **Publish** on **/admin/publish**.
- Did you wait ~60 seconds? The live site refreshes its cache periodically.
- Hard-refresh the public page: **Cmd + Shift + R** (Mac) or **Ctrl + Shift + R** (Windows).
- Still nothing? Open the page in a private/incognito window — your browser may be aggressively caching.

I don't see my draft on the admin page

- Make sure you actually edited a field in Studio (just opening the page doesn't create a draft).
- Hard-refresh the admin page.
- Check that you're logged into Studio as the same user who made the edit.

I uploaded a photo and it looks weird

- Most photo fields have a **hotspot** tool — click the photo and pick the most important point of focus (a face, an action). The crop on different screen sizes will keep that point in frame.
- For best quality: photos should be at least 1600px wide for hero images, 800px wide for cards.
- Don't worry about file format — JPG, PNG, and WebP all work.

I broke something / want to undo

- If you haven't published yet: in Studio, click the ⋮ three-dot menu → **Discard changes**. Live site stays unchanged.
- If you already published: re-edit the page back to what it was before, then publish again. Sanity also keeps a full **History** (three-dot menu → **History**) — you can view any past version and copy values from it.
- If something is truly stuck, text David.

Who can do what

Anyone with a Sanity account can edit. Anyone with the admin password can publish. Keep both circles to people you trust to ship changes to the live site without a second pair of eyes.
